Accessory | KS031-DS05

The KS031-DS double-end cable connects in particular the detector coil with an extension cable (watertight) that has on its opposite end a plug for connecting to the MDV... or MU... amplifiers.

The KS031 special connection cable is specially designed for use with the Series 3000 of metal detectors. Due to its solid construction and polyurenthane sheath, it will not generate any disturbances that could initiate an error signal in the amplifier.

KS031-DSXX Special length up up to 20 m with plug connectors.

TYPE	KS031-DS05
Product ID	p81051
Description	extensions cables KS031-DS, 5m, IP 68
